Position Summary

We are looking for a highly motivated, enthusiastic individual to join our team as a **Postdoctoral Associate**. Dr. Sangita Patels lab, [Department of Ophthalmology](#) at the University at Buffalo, is located at the Buffalo VA Medical Center. Dr. Patels lab studies the physiology of the corneal endothelium, the cell layer that maintains transparency of the cornea. Current projects are focused on studies of the extracellular matrix of the corneal endothelium and responses to cell injury. The Post-Doctoral Associate is expected to be able to move projects from the idea phase to the bench, including interpretation and presentation of findings.

Specific duties include, but are not limited to:

- Establishing new protocols for new research ideas
- Performing and troubleshooting experimental protocols
- Analyzing and interpreting data and preparing for presentation/publications
- Human and cow eye dissections
- General laboratory maintenance/upkeep activities

Learn more:

- Our [benefits](#), where we prioritize your well-being and success to enhance every aspect of your life.
- Being a part of the [University at Buffalo community](#).

As an Equal Opportunity / Affirmative Action employer, the Research Foundation will not discriminate in its employment practices due to an applicants race, color, religion, sex, sexual orientation, gender identity, national origin and veteran or disability status.

Minimum Qualifications

- PhD or MD in a relevant science / health science field
- Excellent organizational, documentation and communication skills
- Self-motivated and able to work independently
